### Session Materials & Sample Code

https://github.com/DeborahK/VSLive2015-SF

## Rate Yourself on Angular

- New to Angular no proficiency
- Just starting out limited proficiency
- Doing it, not fully understanding it working proficiency
- Been there, done that, can help others full proficiency

### Overview

Introduction to Angular

Angular and HTML: Building a View

**Data Binding** 

Angular Code: Building the Module & Controller

Bootstrap: Styling the View

Rule-based Navigation: Routing

Retrieving Data via HTTP Service

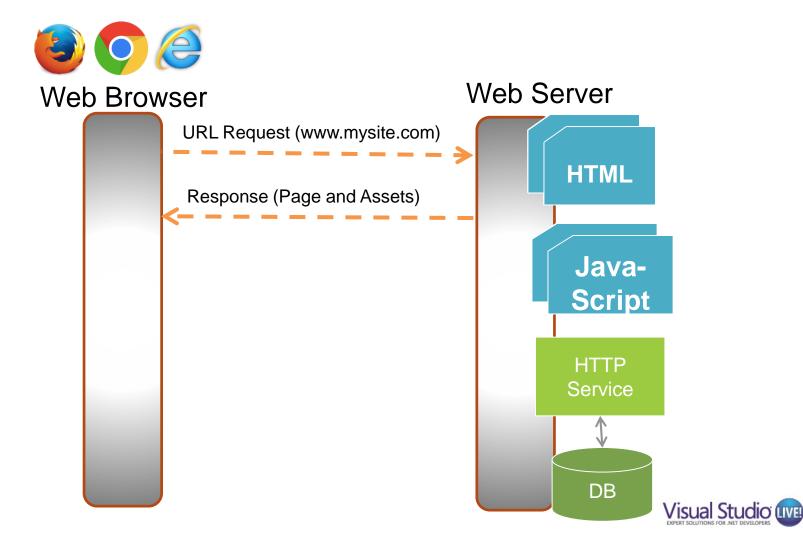

- A client-side JavaScript framework for building interactive Web applications
- Brings simple/clean back to complex Web apps
- Originally developed by Google
- Now open source: https://angularjs.org/

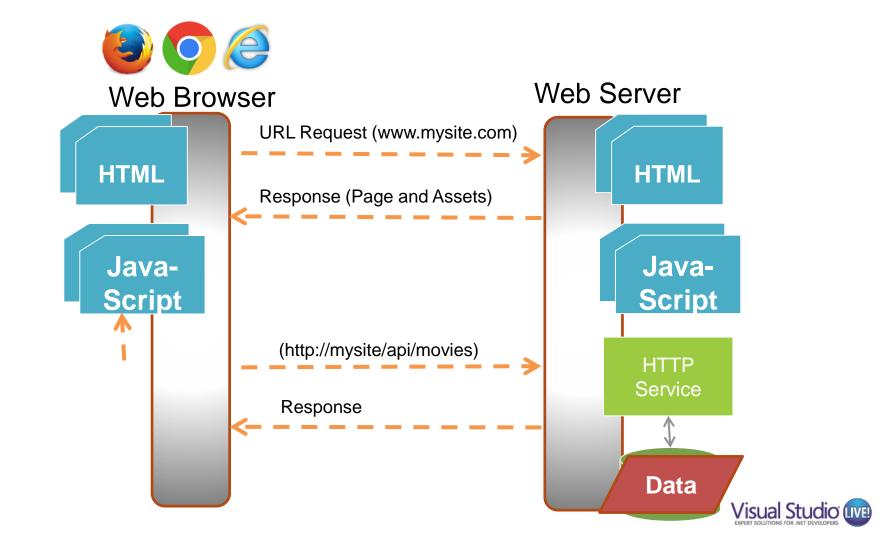

### DEMO: ANGULAR APPS

## Why Angular?

Expressive HTML

Powerful Data Binding

Modularity

Rule-based Navigation Easily Call HTTP Service

**Testable** 

It's Popular

### **Movie List View**

```
<div ng-controller="MovieListCtrl">
<div>{ftitle}}</div>
<div>Filter by:</div><input type="text" ng-model="listFilter" />
<div na-show="listFilter">
  <h3>Movies filtered by: {{listFilter}}</h3>
</div>
<thead>
    <button type="button"
              ng-click="toggleImage()">
            {{showImage ? "Hide" : "Show"}} Poster
         </button>
       Title Director Release Date Rating
    /theads
 <img ng-show="showImage"
             {{ movie.title}}
       {{ movie.director }}
       {{ movie.releaseDate | date }}
       {{ movie.mpaa | uppercase}}
  </div>
```

# Expressive HTML

### **Directives**

- Extend HTML
  - Apply special behavior to attributes or elements in the HTML
  - Are simple to define in the HTML
    - Prefixed with "ng-"
- Provide an extensive set of features and capabilities

### **Directives**

```
<body ng-app="movieHunter">
<img ng-show="showImage"
  ng-src=""/>
<bul><button type="button"</li>
    ng-click="toggleImage()">Poster
</button>
```

## **One Way Data Binding**

Powerful Data Binding

- View is a projection of the model
  - When the model changes, the view reflects the change
- Binding Expression
  - {{movie.title}}

## **One Way Data Binding**

```
<img ng-show="showImage"
     ng-src=' {{movie.imageurl}}" />
 <a>{{movie.title}}</a>
 {{movie.director}} 
 {{movie.date | date}}
 {{movie.mpaa | uppercase}}
```

## **Two Way Data Binding**

Powerful Data Binding

- Data in the model and the view are synchronized
  - Changes to the model are reflected in the view
  - Changes in the view are reflected in the model
- Define using a directive: ng-model
  - ng-model="listFilter"

## Two Way Data Binding

```
<div>
  <div>Filter by:</div>
  <div>
    <input type="text" ng-model="listFilter" />
  </div>
</div>
<div ng-show="listFilter">
  <h3>Movies filtered by: {{listFilter}}</h3>
</div>
<tr ng-repeat="movie in movies | orderBv:'title'
                              | filter : {title : listFilter}">
```

## **Building a View**

- Directives
  - ng-app, ng-if, ng-repeat, ...
- Data Binding
  - One way binding
    - {{movie.title}}
  - Two way binding
    - ng-model="listFilter"

Expressive HTML

Powerful Data Binding

## **Angular Code**

- Write using
  - JavaScript
  - TypeScript
- Divided into
  - Modules
  - Controllers
  - Services

### Module

Defines an Angular component

Tracks the code

Tracks the dependencies

Keeps the application modularized

## **Angular Module Method**

#### Setter Method

#### **Getter Method**

```
angular.module("movieHunter");
```

## **Angular Main Module**

## **Angular Main Module**

```
function () {
   var app = angular.module("movieHunter",
                             []);
```

## **Angular Main Module - IIFE**

```
(function () {
   var app = angular.module("movieHunter",
                             []);
}());
```

### The IIFE JavaScript Pattern

- Immediately-Invoked Function Expression
- JavaScript var declarations have global scope
- JavaScript variables and functions defined within a function have local scope

```
(function () {
    // Code here
}());
```

### Module

- One "main" module for the application
- Any number of additional modules
  - Group related functionality
  - Define reusable common code

### Controller

Defines the Model

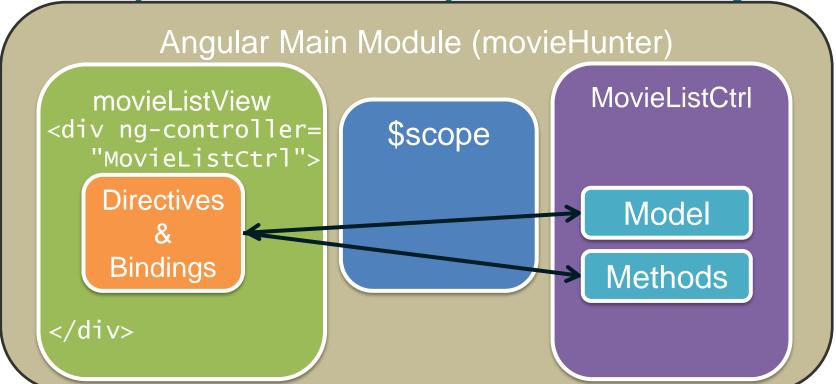

Movies

Implements Methods

Hide/Show Images

View, Controller, and \$scope

### **Angular Controller**

```
(function () {
   angular
        .module("movieHunter")
        .controller("MovieListCtrl",
                    ["$scope",
                     MovieListCtrl]);
   function MovieListCtrl($scope) {
       $scope.movies = [];
        $scope.title = "Search by Movie Title";
       $scope.showImage = false;
       $scope.toggleImage = function () {
            $scope.showImage = !$scope.showImage;
        };
```

```
(function () {
    angular
        .module("movieHunter")
        .controller("MovieListCtrl",
                    ["$scope",
                     MovieListCtrll):
    function MovieListCtrl($scope) {
        $scope.movies = [];
        $scope.title = "Search by Movie Title";
        $scope.showImage = false;
        $scope.toggleImage = function () {
            $scope.showImage = !$scope.showImage;
        };
}());
```

```
(function () {
    angular
        .module("movieHunter")
        .controller("MovieListCtrl",
                     [MovieListCtrl]);
    function MovieListCtrl() {
        $scope.movies = [];
        $scope.title = "Search by Movie Title";
        $scope.showImage = false;
        $scope.toggleImage = function () {
            $scope.showImage = !$scope.showImage;
        };
}());
```

```
(function () {
    angular
        .module("movieHunter")
        .controller("MovieListCtrl",
                     [MovieListCtrl]);
    function MovieListCtrl() {
        var vm = this;
        $scope.movies = [];
        $scope.title = "Search by Movie Title";
        $scope.showImage = false;
        $scope.toggleImage = function () {
            $scope.showImage = !$scope.showImage;
        };
}());
```

```
(function () {
    angular
        .module("movieHunter")
        .controller("MovieListCtrl",
                     [MovieListCtrl]);
    function MovieListCtrl() {
        var vm = this;
        vm.movies = [];
        vm.title = "Search by Movie Title";
        vm.showImage = false;
        vm.toggleImage = function () {
            vm.showImage = !vm.showImage;
        };
}());
```

### View "Controller As" Syntax

```
<div ng-controller="MovieListCtrl">
<div>{{title}}</div>
<div>Filter by:</div><input type="text" ng-model="listFilter" />
<div ng-show="listFilter">
  <h3>Movies filtered by: {{listFilter}}</h3>
</div>
<thead>
     <button type="button"
                ng-click="toggleImage()">
             {{showImage ? "Hide" : "Show"}} Poster
          </button>
        Title Director Rating
     </thead>
  <img ng-show="showImage"
              ng-src="{{movie.imageurl}}" title="{{movie.title}}">
        {{ movie.title}}
        {{ movie.director }}
        {{ movie.releaseDate | date }}
        {{ movie.mpaa | uppercase}}
  </div>
```

### View "Controller As" Syntax

```
<div ng-controller="MovieListCtrl as vm">
<uiv>{{LILIE}}</uiv>
<div>Filter by:</div><input type="text" ng-model="listFilter" />
<div ng-show="listFilter">
  <h3>Movies filtered by: {{listFilter}}</h3>
</div>
<thead>
     <button type="button"
                ng-click="toggleImage()">
             {{showImage ? "Hide" : "Show"}} Poster
           </button>
        Title Director Release Date Rating
     </thead>
 <imq nq-show="showImage"
              ng-src="{{movie.imageurl}}" title="{{movie.title}}">
        {{ movie.title}}
        {{ movie.director }}
        {{ movie.releaseDate | date }}
        {{ movie.mpaa | uppercase}}
  </div>
```

### View "Controller As" Syntax

```
<div>Filter by:</div><input type="text" ng-model="listFilter" />
<div ng-show="listFilter">
  <h3>Movies filtered by: {{listFilter}}</h3>
</div>
<table ng-if="vm.movies.length"
 <thead>
    td><button type="butcon"
                  ''m.toggleImage()"
           {{vm.showImage ? "Hide" : "Show"}} Poster
         </button></ta>
       Title Director Rating
    </thead>
 <img ng-show="vm.showImage"
              {{ movie.title}}
       {td>{i movie.director }}
       {{ movie.releaseDate | date }}
       {{ movie.mpaa | uppercase}}
```

</div>
